Welcome to Phoenix!

Thank you for buying the Phoenix UnderSink! Congratulations on your first step to creating a healthier life and greener planet.

To fully benefit from the support that Phoenix offer, register your product online today.

What's in the box?

A. Stainless Steel UnderSink head
B. Phoenix Spirit Cartridge
C. Stainless Steel lower housing
D. Phoenix Faucet with 3/8" PE tube
E. Wall mounting Clamp

Important

Read this user manual carefully before you use your Phoenix UnderSink and save it for future reference.

Features

- The housing of the Phoenix Gravity is made of the highest grade of Stainless Steel.
- The filtration system consists of a 3 stage ceramic filtration candle.
- ***First Stage:*** The first stage consists of the Phoenix Spirit ceramic which is manufactured to provide genuine sub micron filtration. The cartridge reduces fine particulate matter, bacteria, cysts and turbidity.
- ***Second Stage:*** The incorporation of silver locked within the ceramic structure inhibits the growth of bacteria and gives enhanced bacteriostatic and self sterilizing properties.
- ***Third Stage:*** An inner core of activated carbon removes chlorine, VOC's and industrial solvents.

Warning

- Children should be supervised to ensure that they do not play with the water filter.
- The cartridges and accessories are designed for use with the cold supply of the mains water. Hot water may damage the filter.

Applications

- Only use the Phoenix Water Filter to filter water that meets the drinking water standards.
- Do not use filtered water in aquariums or to water plants, it can be harmful to the fish and the plants.

Installation

Unscrew housing C from housing A. Remove the bubble wrap off the Spirit Cartridge, then tighten the filter cartridge B securely. Firmly screw housing ‘C’ over housing ‘A’, to avoid leakage.

As the UnderSink plumbing varies from kitchen-to-kitchen, Phoenix provides a 3/8” push-fit PE tube from the unit to the Phoenix Faucet. However, additional accessories will be required based on individual kitchen plumbing configurations.

Phoenix recommends you contact your local plumber, when not competent with the basic plumbing required for the Phoenix UnderSink unit.

Usage

When using brand new cartridges, it is advisable to dispose of the first 8 litres of filtered water. Doing this removes the discoloration of the water due to the unused activated carbon, as well as relieving the muddy taste of the freshly manufactured ceramic.

A reduction in the flow rate indicates the need to replace the filter. Rinsing the candle under running water relieves blockage. However, due to the activated carbon exhaustion, change the Spirit cartridge every six months.

When not in use air-dry the Spirit cartridge for a minimum of 24 hours then store in dry place.
